RECOMMENDATION LETTER

ROBOTI c.s. successfully collaborated with RR&CO. Knowledge Centre Ltd. on the proposal preparation for the Structural Funds public call »Competence centers for the development of staff«. Through this collaboration, our project »Competence centre Robotics« received an exceptionally high score during the evaluation: 98 points out of a 100. The two-year project itself is complex from both organizational and content standpoint as it focuses on the development of competences for greater competitiveness of the robotics industry, uniting 14 companies into a project Consortium.

The exceptionally high score we received from the evaluators confirms the quality of the submitted proposal and serves as a confirmation of quality collaboration between ROBOTI c.s. and RR&CO. The added value and professionalism of RR&CO. was particularly evident in their:

- Setting the guidelines for the optimal structure of the proposal
- Giving clear and concise directions for what the role of lead partner should be as well as what the roles of individual partners should be
- Logically connecting parts of the proposal into a coherent whole that was more than sum of its parts, written in the language especially tailored to the evaluators (to what evaluators want to read in the proposal)
- Expertise in helping us prepare a realistic financial plan, which was accepted by all partners without objections
- Taking on administrative burden of proposal submission, thus allowing the lead partner to focus exclusively on proposal content and partner relations.

These are all reasons why we fully recommend cooperation with RR&CO.

ROBOTI c.s. d.o.o.
